**REMARKS**

In response to the Restriction Requirement, which was issued for the above-identified application on October 22, 2008 applicants hereby elect the species of saponin fractions A and C in claim 10, with traverse. Applicants submit that it would not be unduly burdensome to search and examine all of the species together in one application. Applicants therefore request that the restriction requirement be withdrawn.

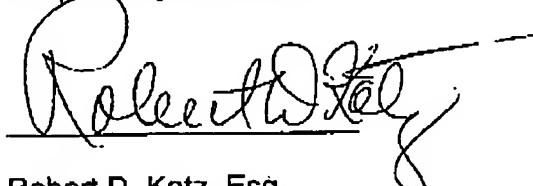

Applicants respectfully point out that the Examiner's requirement to elect one saponin fraction for claim 10 for examination is misplaced. Applicants note that the two saponin fractions recited in the claims work together to provide superior immunomodulating activity. Thus, applicants submit that claims 1 and 5 are combination claims, not generic claims, in that they do not present a selection of alternative species. There must be at least two saponin fractions to carry out the invention, and applicants have amended claim 10 to reflect this. Therefore, the request to identify a single specie for search and examination cannot stand. Applicants respectfully request that the restriction requirement identification of a single specie in claim 10 should be reconsidered and withdrawn.
